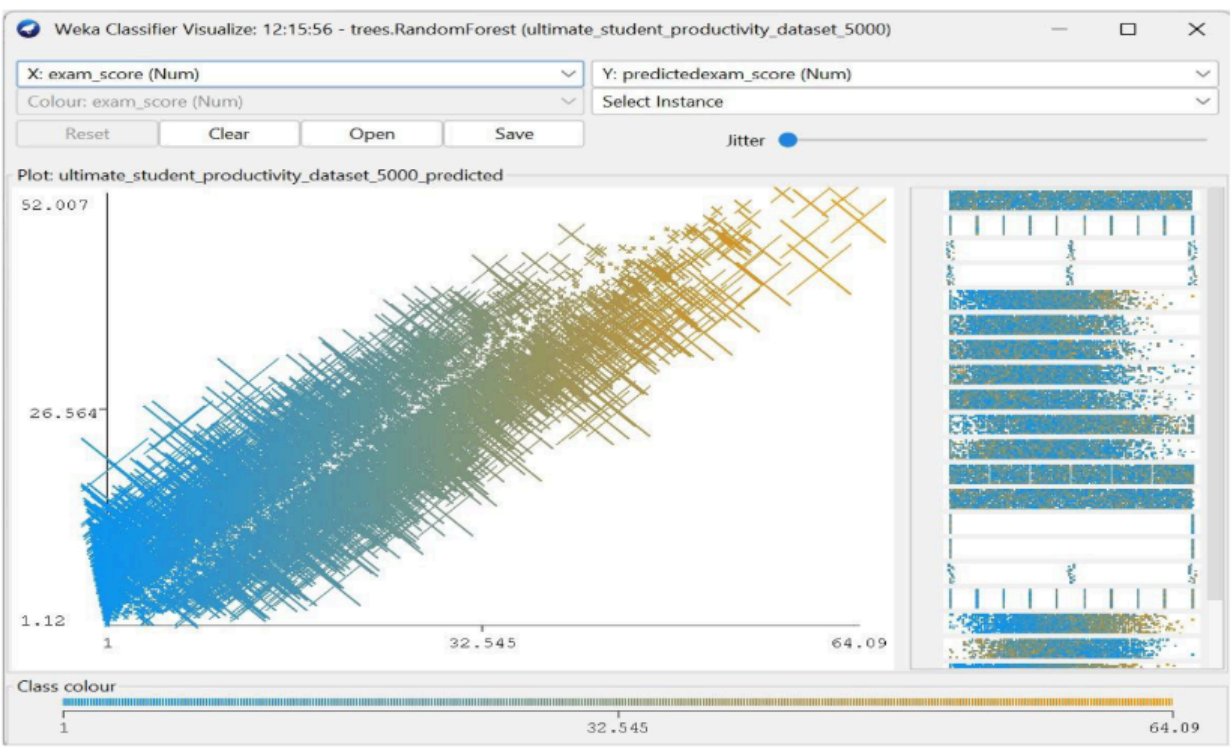
EXPERIMENT 4 CLUSTERING ALGORITHMS

AIM:
To implement clustering algorithms using weka.

PROCEDURE:

1. Open weka
2. Load dataset
3. Choose cluster tab
4. Select the cluster type as SimpleKMeans
5. Select number of clusters as 3
6. Select the distance function as Euclidean
7. Click start
8. Observe the centroids of the clusters formed
9. Observe the number of instances formed in each cluster
10. Analyse the scattered plots
11. Analyse the clusters and its grouping .

OUTPUT:



RESULT:
Therefore , Clustering is successfully implemented and verified using weka.
